EDUCATION

B.TECH AI&DS • 2021 - 2025
Velammal Institute of Technology,
Tiruvallur

I have secured 8.5 CGPA upto 8th semester.

HSC • 2021
Boys Higher Secondary School,
Singampunari
I have secured **84.8%** in my HSC.

SKILLS

Python
Cloud Computing
SQL
MS Office
Machine Learning
Model Training
Flask
Pytorch
FastAPI
UI UX Design

ADDITIONAL

Ayanavil Technologies
Ptd. -certified Full Stack
Development.
Google certified -Data
Analytics.
Ayanavil Technologies
Ptd. -Attended a 3 day
workshop on POWER BI.

OBJECTIVE

AI/ML Engineer with hands-on experience in machine learning, deep learning, and intelligent application development. Currently working as an ML Engineer Intern at Adela Software & Services Pvt. Ltd., with practical exposure to AutoML systems, MCP-based AI projects, FastAPI/Flask services, and React-based frontends. Strong in end-to-end model lifecycle, API integration, and experimentation. Passionate about building scalable AI and GenAI-enabled solutions.

PROFESSIONAL EXPERIENCE

Adela Software & Services Pvt. Ltd., | Aug 2025 – Present
Junior AI/ML Engineer

PROJECTS

AutoML App:

Designed and developed machine learning pipelines for structured datasets, including preprocessing, feature engineering, model training, and evaluation. Built an AutoML web application capable of automatically training and comparing models such as Decision Tree, Random Forest, Logistic Regression, and other ML algorithms. Implemented backend services using FastAPI and Flask for model training, inference, and result delivery..

MCP Project – *Dot fit Desk.*

Integrated Model Control Protocol (MCP) concepts into AI workflows, enabling modular and extensible AI components. Developed RESTful APIs for seamless integration between ML models and frontend applications. Collaborated with frontend developers to integrate ML services with React, HTML, and CSS interfaces. Conducted model performance evaluation and comparison to support data-driven decision-making.

HORSELESS CARRIAGE SPARES - *Built using JAVA.*

Developed a Java-based e-commerce platform for buying and selling automotive spare parts and accessories. Implemented using Java (JSP/Servlets), NetBeans, and MySQL as the backend database. Incorporated user modules including Admin, Customer, and Delivery Boy with secure authentication. Used JDBC for database connectivity and HTML/CSS for front-end interface design. Enabled real-time order tracking, cart management, and dynamic inventory updates.

CNN-based skin detection - *Built using PYTHON.*

As part of my **final year project**, I developed a deep learning model using Convolutional Neural Networks (CNNs) with TensorFlow and Keras for automated classification of skin diseases from dermoscopic images. The system incorporated preprocessing techniques such as normalization, augmentation, and transfer learning to improve model accuracy and efficiency. A real-time, user-friendly web interface was built using Flask to enable telemedicine diagnostics and remote accessibility. Tools used: Python, TensorFlow, Keras, OpenCV, Flask, HTML/CSS.
